Agenda

Connected Components Workbench Overview

What's NEW in Release 8?

Connected Components Workbench™

Single Software for all your component devices

**Rockwell
Automation**

Configure

Program

Visualize

PUBLIC

Connected Components Workbench™

Lower the cost to Design, Develop, & Deliver your machine

**Rockwell
Automation**

■ Easy to Configure

- Single software package for all your essential components reduces time to create and maintain your machine design
- PowerFlex® Drive wizards makes configuration easier
- GuardMaster® Configurable Safety Relay editor make safety logic intuitive

■ Easy to Program

- Micro800® supports your choice of IEC-61131 PLC programming languages (Ladder Diagram, Function Block Diagram, Structured Text) to suit your application
- User-defined function blocks speed machine development
- Standard PLCopen® motion instructions with PTO Motion Axis and HSC Feedback Axis removes the complexity from simple positioning applications

■ Easy to Visualize

- Micro800® variable names can be directly referenced by HMI tags which results in less complexity and time-saving benefits

Connected Components Workbench™ R8.00

Workbench – Comparison of Standard vs Developer Editions

**Rockwell
Automation**

	Standard Edition	Developer Edition
Price	Free for download or on DVD	Contact local distributor
Common Environment to configure all your common devices	Yes	Yes
Project Import/Export	Yes	Yes
Archive Manager	No	Yes
Micro800® Programming		
- IEC 61131-3 ladder diagram, function block diagram, structured text	Yes	Yes
- User Defined Function Block	Yes	Yes
- Run Mode Change	No	Yes
- User Defined Data Types	No*	Yes
- Spylist Used	Existing lists	New lists can be created
- Intellectual Property Protection	No**	Yes

“*” – requires Developer Edition to create new data types which can be used in Standard Edition.

“**”- requires Developer Edition to create passwords which can be used in Standard Edition.

- Recommended upgrade to previous releases for
 - Windows 8.x support
 - Micro800® Run Mode Change
 - New Guardmaster® 440C-CR30 Ethernet Plug-in
 - New PanelView™ 800 series of HMI's
- Standard Edition – free for download or order free DVD
- Developer Edition – contact your local distributor or Rockwell Automation salesperson
 - Individual lifetime license using FactoryTalk® Activation
 - OEM and Enterprise Toolkits with yearly activations are also supported
- Catalog Number 9328-CCWDEVxxE
 - xx → EN-English, PT-Portuguese, FR-French, IT-Italian, DE-German, ES-Spanish, ZH-Chinese (non-English versions available approximately 3 months after English)

Agenda

Connected Components Workbench Overview

What's NEW in Release 8?

- Standard Edition
 - Project Import/Export makes sharing and copying project easier
 - Unattended Installation to automate installation on large numbers of PCs
 - Full Windows 8.0 and 8.1 support including Micro810® USB Driver

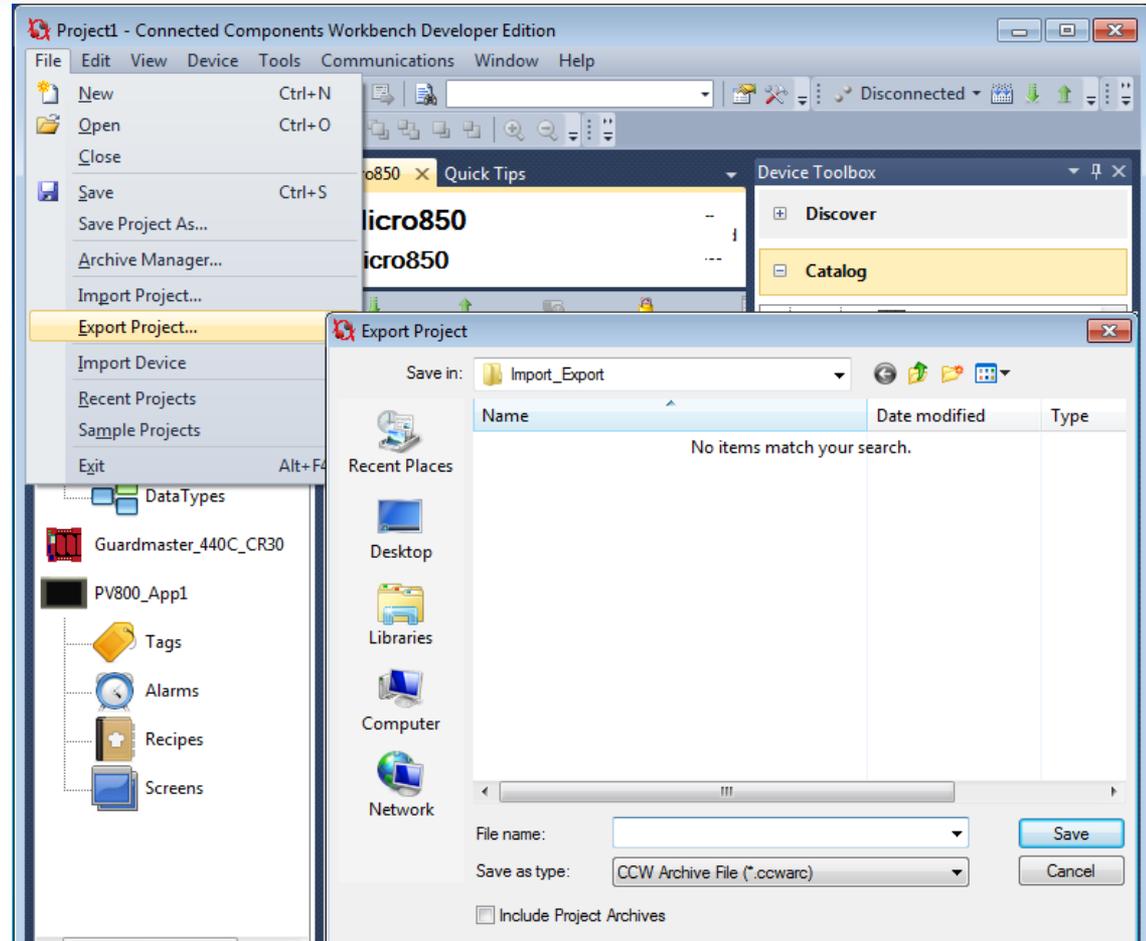

- Developer Edition
 - Archive Manager helps to track changes to the project with a timestamp and description
 - Run Mode Change

Connected Components Workbench™ R8.00

Rockwell
Automation

Workbench – Project Export/Import

- Project Export/Import
- Compresses entire project to single file
 - File extension .ccwarc
- Easy to email or share using thumb drive

Connected Components Workbench™ R8.00

Rockwell
Automation

Workbench – Unattended Installation

- Allows large scale installations to be automated without user input
- IT departments have more control over the roll out of SW releases
- Setup.exe /? for command line help

```
Z:\Share Folder for File exchanges\CCW R8\8.00.00-CCW-Std-DVD>setup/?
Z:\Share Folder for File exchanges\CCW R8\8.00.00-CCW-Std-DVD>

Connected Components Workbench 8.0 Setup
Copyright (c) 2015 Rockwell Automation Technologies, Inc.
All Rights Reserved.

Usage:
  Setup /Q /AcceptAllLicenseItems [/UserName=user_name]
      [/Organization=organization_name] [/SerialNumber=serial_number]
      [/AutoRestart]

  All parameters are not case sensitive. If a parameter value includes
  space or special character, mark the parameter value by double
  quotation marks.

Examples:
1. Install Upgrade Edition. Setup will auto restart when
   the installation is done.
   Setup /Q /AcceptAllLicenseItems /AutoRestart
2. Install Developer Edition. Setup will accept the Serial Number
   if the specified serial number is valid and the computer will restart
   automatically if needed.
   Setup /Q /AcceptAllLicenseItems /SerialNumber="0123456789" /AutoRestart
3. Install Standard Edition. Setup displays a restart dialog that prompts you to
   restart the computer when there is a reboot requirement.
   Setup /Q /AcceptAllLicenseItems
```

- Windows 8.0 and 8.1 fully supported in Release 8
- R7 supports Windows 8.0 and 8.1 except for Micro810®

Release 7 Release Notes

Operating System Requirements

This release is supported on the following operating systems:

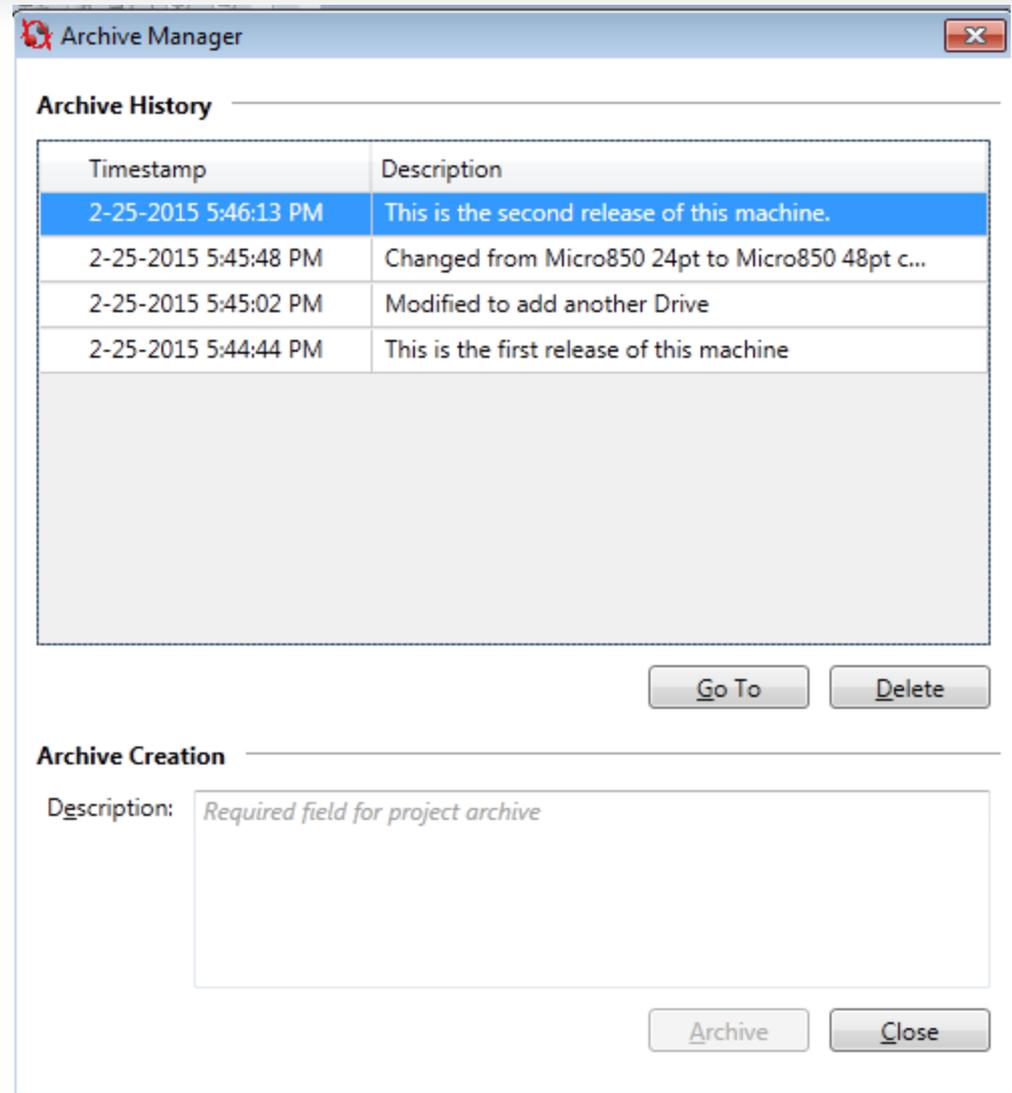

- Microsoft Windows® 7 (32-bit and 64-bit)
- Microsoft Windows® 8 and 8.1 (32-bit and 64-bit)
Note: Not recommended for use with the Micro810 due to USB Adapter driver. Driver will be updated in Release 8.
- Microsoft Windows 2008® (R2)

Connected Components Workbench™ R8.00

Workbench – Developer Edition Archive Manager

**Rockwell
Automation**

- Archive Manager helps you to track changes to your project with Timestamp and Description
- Easily view all revisions to the project
- Go To any archive revision quickly and easily
- Project Export/Import has the option to also include all archive revisions and compress to a single file for sharing

- Simplified Debugging – No more Debug Mode
 - Immediately can monitor variables and logic after connecting to controller
- Run Mode Change
 - Make small logic changes while connected to the controller in Run Mode
 - Requires Developer Edition
- Motion Feedback Axis with 2080-MOT-HSC plug-in
 - Supports motion instructions. No more UDFBs for motion feedback applications
- DeviceNet Pass-through and Diagnostics
 - Makes debugging DeviceNet network easier
- Bit Access of Integer Array Elements
- Flash update firmware from microSD card
- Secure Variable Access
 - Prevent access to global variables over a CIP network

- Use Run Mode Change (RMC) to make small changes to program logic without going to Program mode, Building, and Downloading
 - Can add/modify POU's and UDFB's in all languages (LD, FBD, ST) up to RMC memory limitations
 - Make changes in Remote Run or Program Mode
 - Cannot change controller configuration
- Saves time debugging programs
 - Controller variable values are preserved and program execution continues while making changes to the program logic
 - Able to Test Logic while in RMC mode and then decide to permanently Accept or Undo Changes
- Memory Diagnostics page enhanced to allow monitoring of RMC memory usage
- Developer Edition required
 - Only supported by Micro820™/830/850 controllers

Connected Components Workbench™ R8.00

Micro800® – Run Mode Change Workflow

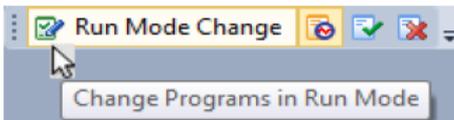

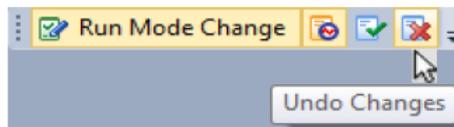

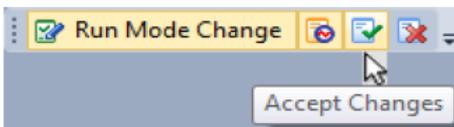

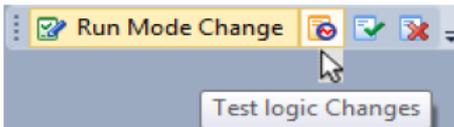

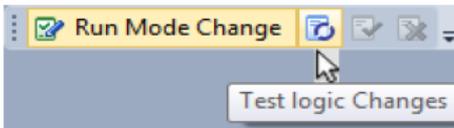

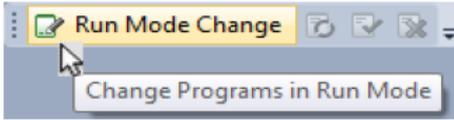

Rockwell
Automation

Typical Workflow

TOOLBAR

TOOLBAR STATE

ACTION

Enter RMC

DESCRIPTION

Indicates that Run Mode Change is not currently being performed. Click to enter Run Mode Change to make edits to program logic in design mode while connected to the controller. If disconnected from controller, CCW will first connect to the controller.

Test Logic

Indicates that changes are detected in the program logic due to a Run Mode Change. Click to Test Logic Changes. CCW will build the project. If successful, CCW will enter debug mode to allow monitoring your program. Otherwise CCW will stay in design mode.

More Changes

Indicates that Test Logic Changes have been successfully performed. Click to return to design mode and make more changes to the program logic.

Accept Changes

Indicates that Test Logic Changes have been successfully performed. Click to Accept all changes and stay connected to the controller in debug mode.

Undo Changes

Indicates that Test Logic Changes have been successfully performed. Click to Undo all Changes for this RMC session and stay connected to the controller in debug mode.

Abrupt Exit

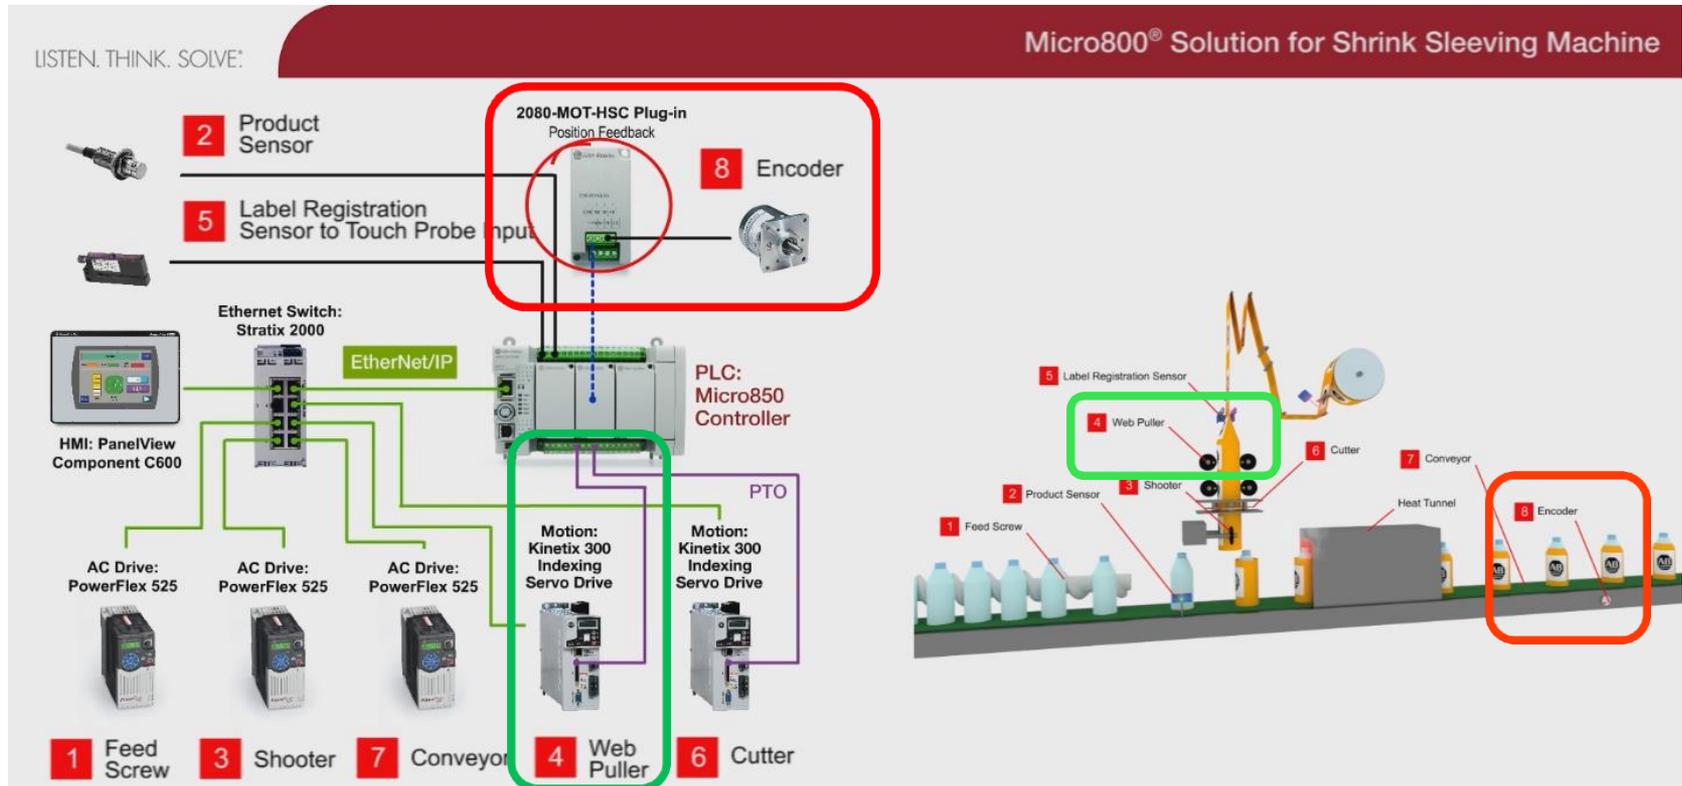

Indicates that Run Mode Change is in progress but user wants to exit RMC abruptly. Click to exit Run Mode Change. It is recommended to either Accept or Undo Changes. Otherwise controller will be left in Run Mode Change with uncommitted changes.

Connected Components Workbench™ R8.00

Micro800® – Feedback Axis with Motion Instructions

Rockwell
Automation

- Motion Function Blocks supported for 2080-MOT-HSC Plug-in for easier programming
 - Eliminates need for feedback axis UDFBs. (UDFBs still required for high speed counting)
- Verify position of motion PTO axis and servo drive encoder feedback (e.g. web pull)
- Retrieve speed and position information on a feedback axis (e.g. conveyor)

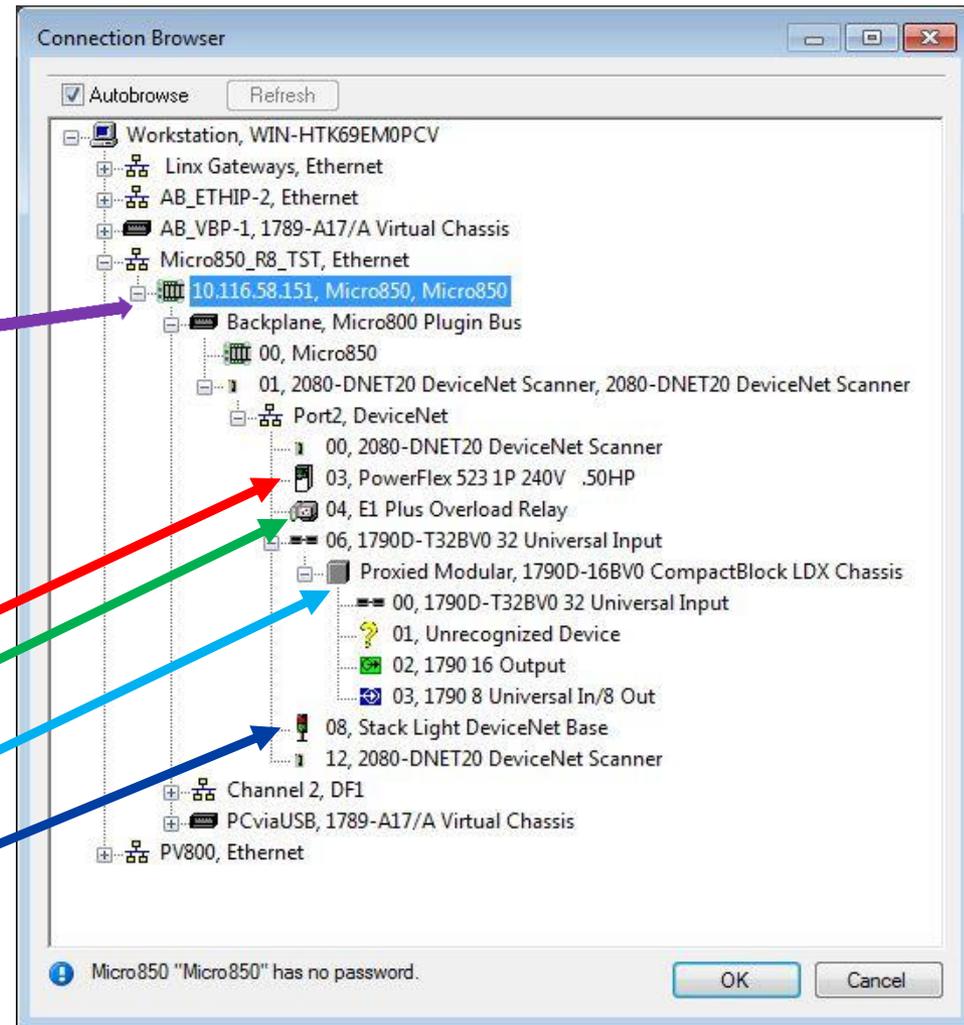

Connected Components Workbench™ R8.00

Micro800® – DeviceNet Pass-through 2080-DNET20

Rockwell
Automation

- No need for additional linking devices or gateways for CCW to configure devices on DeviceNet
 - Micro820™
 - Micro830®
 - Micro850®
- User can browse from PC's USB or Ethernet port through the Micro800® controller directly to DeviceNet using RSLinx
 - PowerFlex® Drives
 - E1 Plus Overload
 - CompactBlock LDX
 - Stack/Tower Light

Connected Components Workbench™ R8.00

Micro800® – DeviceNet Diagnostics

Rockwell
Automation

- DeviceNet Diagnostics page has diagnostics beyond what's available in RSLinx browsing and in a more user-friendly format

- **Scanner Information**

- **Device OK**

- **Device Faulted**

- Nodes that are out of range of the scanner (Scanner + 20 nodes)

The screenshot shows the 'Micro850 - Communication Diagnostics' window. The 'Communication' dropdown is set to 'DeviceNet'. Under the 'Scanner' section, the following information is displayed:

- Slot Number: 1
- Status: No network traffic detected for scanner
- Mode: IDLE
- Baud Rate: 500 Kb
- Address: 12
- AutoScan: Disabled

The 'Nodes in Scan List' section displays a grid of nodes from 0 to 63. A legend on the right indicates the status of each node:

- Scanner (blue vertical bars)
- Connected (green circle)
- Fault (red circle with diagonal lines)
- Not Configured (white circle)
- Out of Range (grey circle)

In the grid, node 12 is the scanner (blue vertical bars). Nodes 14, 16, and 19 are connected (green circles). Nodes 10, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, and 63 are out of range (grey circles). A blue oval highlights the nodes from 30 to 63, which are out of range of the scanner.

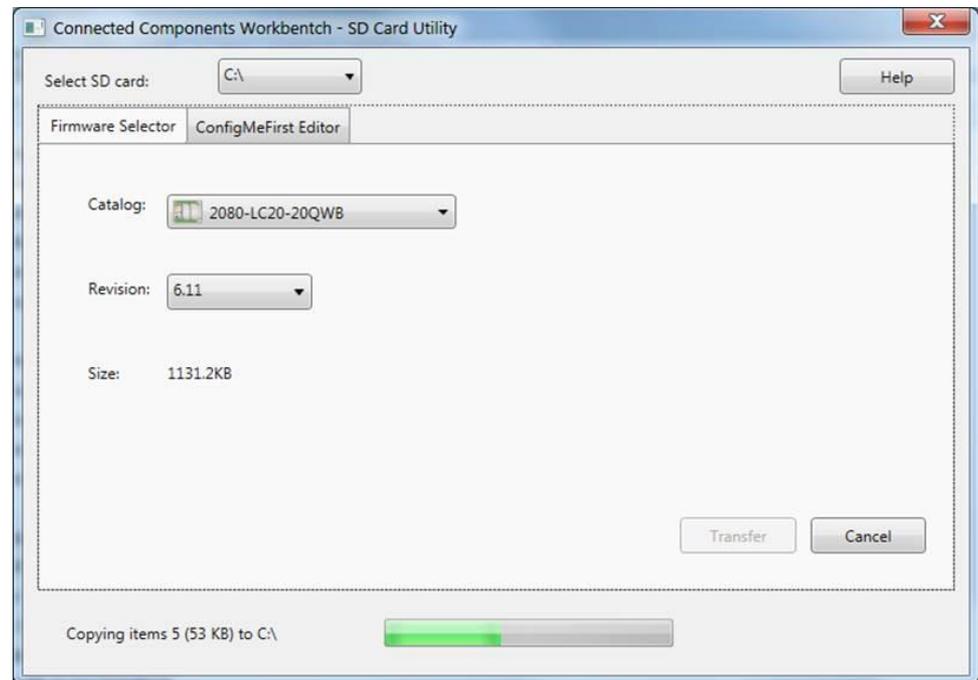

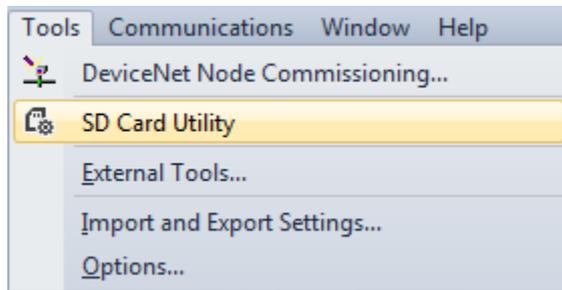

- Allows array of integers to contain Boolean data such as for Alarms
- Makes it easier to convert MicroLogix programs (using physically addressed integer data files) to Micro800® (symbolic variables)
- Example: `DATA[10].5` → references bit 5
Previously had to move the integer to a temporary variable
`DATA_TMP.5` to reference bit 5
- Note: Not supported by Micro810® since no FW R8 release

Connected Components Workbench™ R8.00

Micro800® – Flash update from microSD card

**Rockwell
Automation**

- No need to use ControlFlash utility on a PC to update FW in controller
 - Enabled in ConfigMeFirst.txt file
- Utility provided to copy the ControlFlash FW files from PC to the microSD card
 - Accessible from Tools menu

Connected Components Workbench™ R8.00

Micro800® – Secure Variable Access over CIP Networks

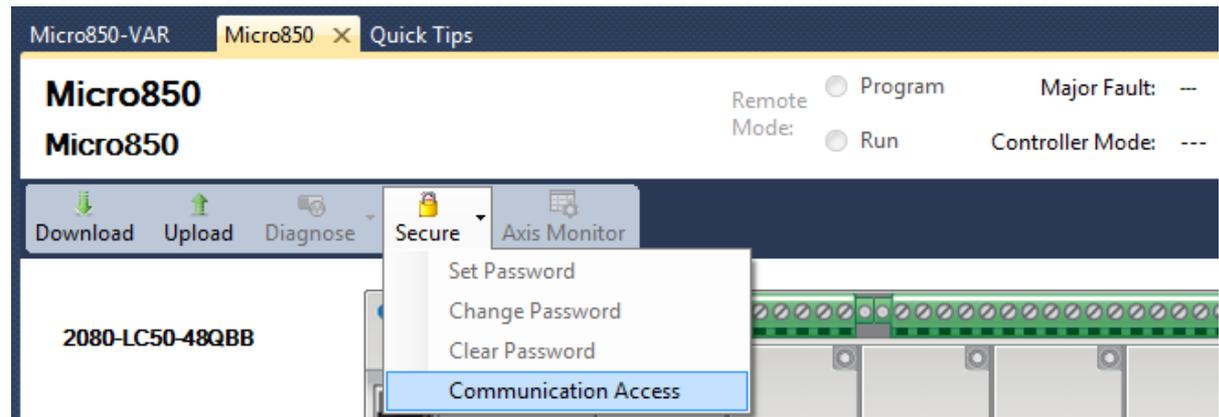

**Rockwell
Automation**

- Ability to restrict read/write access to global variables over a CIP network
 - Currently the default is to allow read/write access to global variables
- Use to make communications to the controller more secure
 - Restrict HMI or other controller access

Name	Alias	Data Type	Communication	Comment
Diag_Data		DINT	Read	
Output_Data		DINT	No Access	

No Access
Read/Write
Read

- Access from controller page or device menu

Connected Components Workbench™ R8.00

PanelView™ 800 – Overview of new Component HMI

**Rockwell
Automation**

- Workbench Release 8.00 (or higher) required to support PanelView™ 800
 - DesignStation 8.00 (or higher)
- Easily migrate PanelView™ Component applications using Change Graphic Terminal
 - PanelView™ Component applications are compatible with PanelView™ 800 terminals but it is recommended to use the Change Graphic Terminal feature due to screen size, resolution, and color differences especially with 7" and 10"
- Additional Industrial Symbols available to make screens more representative of actual machine
- RSLinx® Classic support. Browse Ethernet network and download easier
 - Able to take advantage of Micro800 pass-through. Download USB → Ethernet.
- Enhanced Recipe function
- ControlFLASH® utility supported to update FW
- Larger alphanumeric keypad to reduce mistakes when entering values

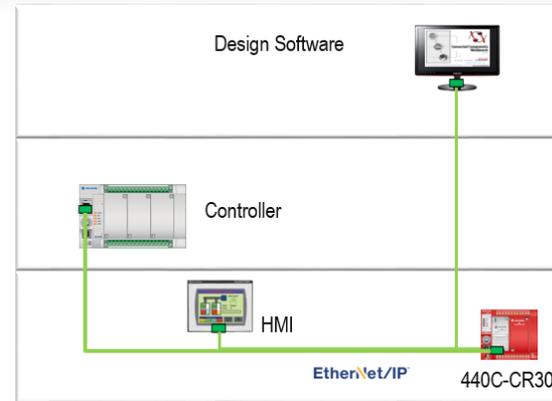

Connected Components Workbench™ R8.00

GuardMaster® 440C-CR30 – Overview

**Rockwell
Automation**

■ New 440C-ENET Ethernet Plug-in module

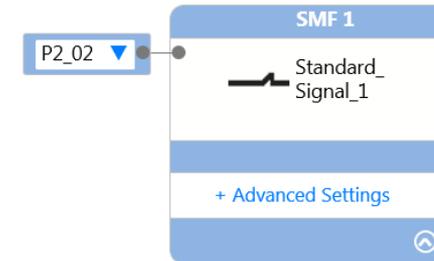

- Share diagnostics with Micro820™/850 controllers over an EtherNet/IP network

440C-ENET Plug-in

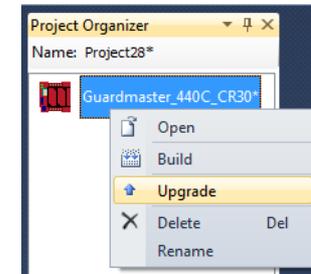

■ New Standard Signal function block

- Allows you to use standard-rated signals from plug-ins or the communications network as interlocks in your application logic

■ Project Upgrade

- Upgrade version 6 or 7 440C-CR30 safety relay projects to latest revision 8

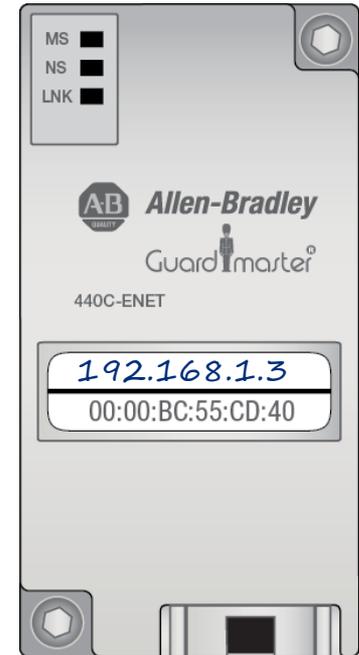

Connected Components Workbench™ R8.00

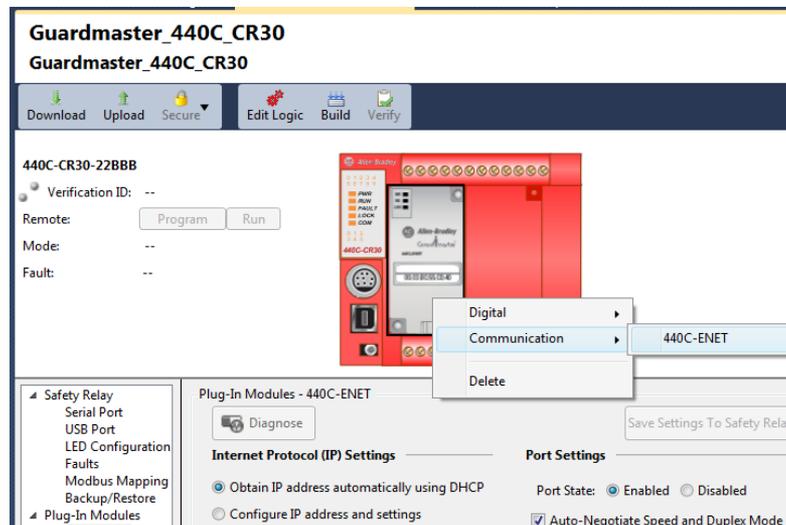

GuardMaster® 440C-CR30 – Ethernet Capabilities

**Rockwell
Automation**

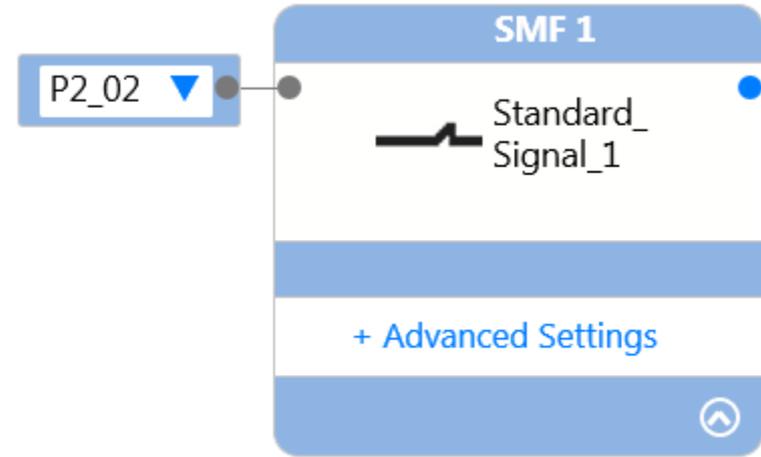

- Configure and Monitor 440C-CR30
- Troubleshoot 440C-CR30 safety system on HMI or in automation controller with diagnostic information shared over EtherNet/IP
- Share standard Control signals between automation controller and 440C-CR30 safety relay (resets, feedback, etc.)

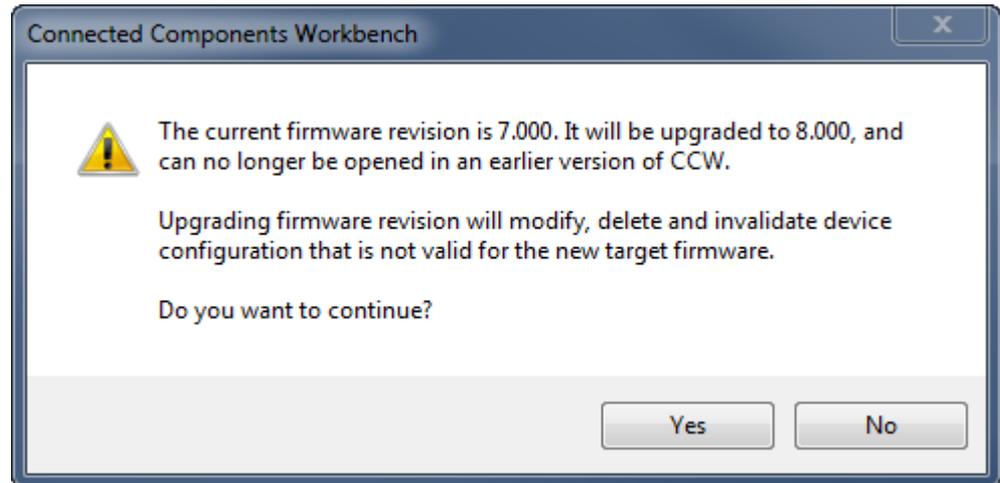

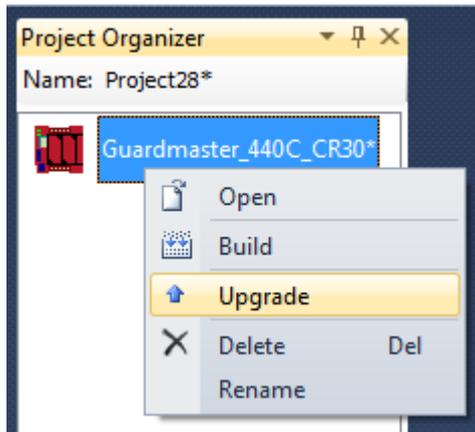

440C-ENET Plug-in

- New Standard Signal Safety Monitoring Function.
 - Allows you to easily use standard rated signals from plug-ins or the communication network in your application logic

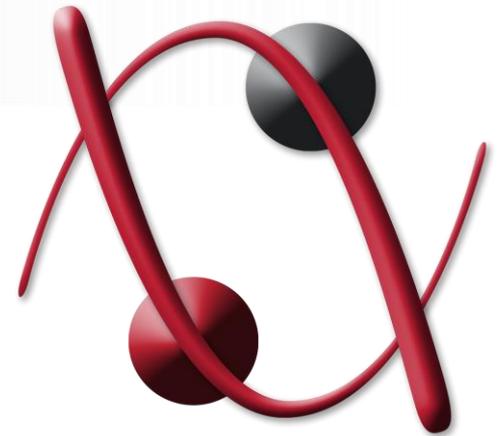

- Upgrade project to latest version for latest features
 - Upgrade version 6 or 7 projects to the latest version 8
 - Right-click on 440C-CR30 in Project Organizer to Upgrade
