Micro800 Controller Family

Using Connected Components Workbench™

Rockwell
Automation

Nano PLC

Micro PLC

24-132pts

Each controller is cost and performance optimized for specific applications

Performance/Features

12pts

Micro810

Programmable relay replacer and timer
8A relay outputs, Analog inputs

20-36pts

Micro820

For smaller standalone machines and remote automation

Embedded
Analog I/O

10-88pts

Micro830

For standalone machines with motion

Local I/O

Micro850

For standalone machines with motion and more I/O and Ethernet connectivity.

EtherNet/IP

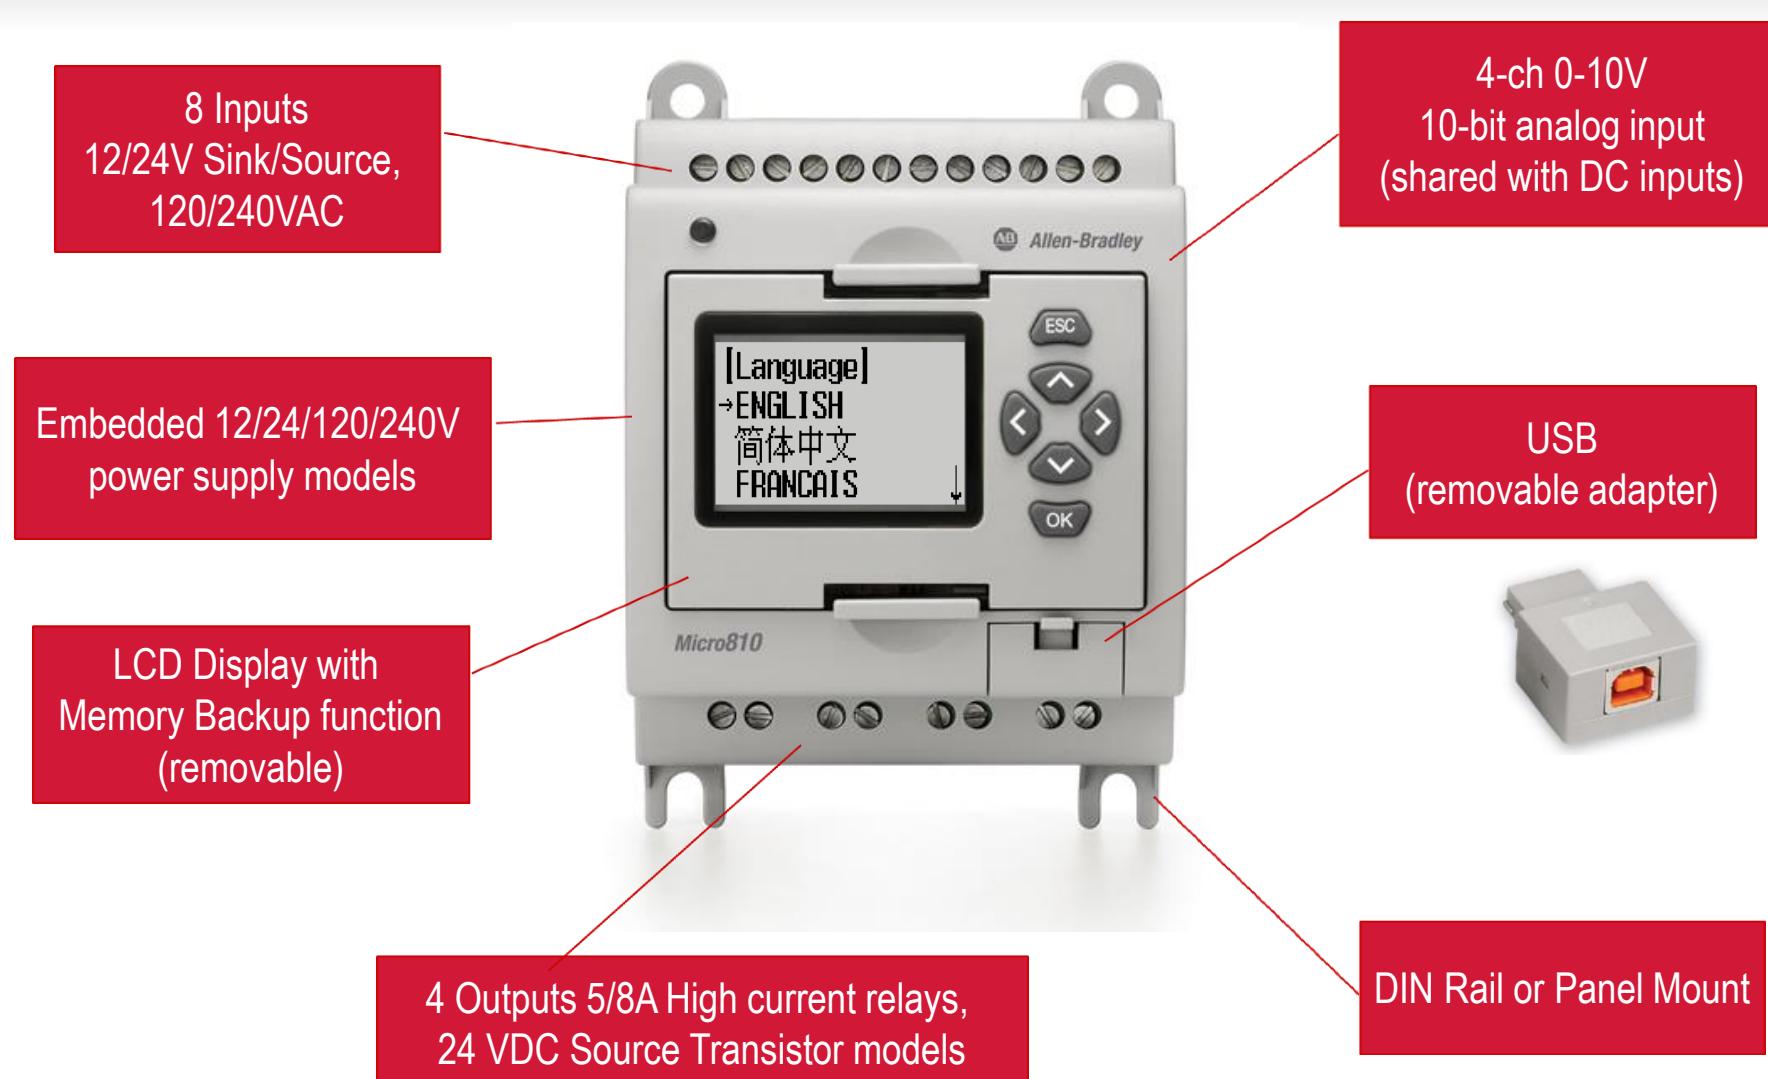

Micro810® Anatomy

Smart Relay Micro PLC, 12pts

Rockwell
Automation

Micro810 Controller

- The Micro810 controller has the price of a smart relay but with the programming capabilities of a micro PLC. As part of the Micro800 PLC family, the Micro810 controller shares programming environment as Micro820, Micro830 and Micro850
- Embedded smart relay function blocks configured from 1.5 in. LCD and keypad
 - No software or program download required
 - Use in relay applications, which require a small amount of logic (up to 4 function blocks), applications include programmable timer and lighting control
 - Function blocks include Delay OFF/ON Timer, Time of Day, Time of Week, Time of Year, Counter
- High current (8A) relay outputs replaces the need for external relays
- Up to four configurable analog input channels
- Program download via USB programming port (adapter required)
- Optional 1.5 in. LCD Display can be inserted onto front of controller and removed under power
 - Used to configure controller and to monitor I/O status
 - Contains memory backup function
 - Run/program mode switching
 - LCD password
- LCD instruction allows LCD Display and keypad to be used as simple 4-line text display with 6 buttons available as inputs

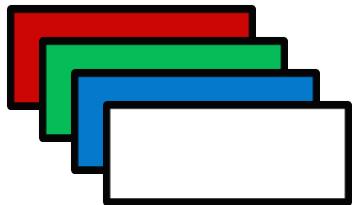

Micro820™ Anatomy

Datalog/Recipe

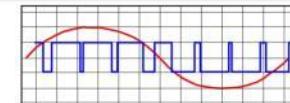

Ethernet

5 KHz PWM
(no PTO motion)

EtherNet/IP™

Micro820 Controller, 20 pt

- The Micro820 20-pt controller is designed for simpler standalone machines and remote automation application
- Function as a remote terminal unit (RTU) for SCADA applications with support for CIP and Modbus over serial and Ethernet communications
- Embedded support for 4 thermistor temperature inputs can function as a direct digital control (DDC) for the building management systems (BMS)
- Embedded 4 channel analog input and 1 channel analog output for speed or torque control
- EtherNet/IP™ for Connected Components Workbench programming, RTU applications and HMI connectivity
- 5 kHz PWM Output for controlling solenoids and valves
- Built-in Real Time Clock (RTC) with no battery required
- microSD™ slot for program transfer, data log and recipe management. The supported formats are FAT 32/16 with maximum card size at 32 GB. The microSD card class speed that is supported are Class 6 and 10 SDSC and SDHC.
- Models available with removable terminal blocks for easier wiring and installation
- Supports up to two plug-in modules
- Optional remote 3.5 in. LCD display that connects to controller's embedded RS-232

Remote LCD Display

- The Allen-Bradley Micro800 Remote LCD Display connects to the embedded RS-232 port and works as an essential accessory for the Micro820 controller
- Used as a simple HMI with 4 or 8 lines of ASCII text
- A tactile keypad with 6 programmable function keys
- System menu is available in multiple languages for direct viewing and editing of controller variables
- Ethernet address of the controller can be easily set from the menu
- Configurable start-up screen
- 4 backlight colors available, can be programmed for alarm function
- Rated IP65, it is suitable for front panel mounting. It also supports DIN rail mounting next to the controller
- USB port for program download to controller

Micro830® Anatomy

Flexible Micro PLC with Simple Motion, 10/16/24/48pts

**Rockwell
Automation**

Embedded 24 VDC Power Supply

12/24V sink/source,
120VAC input models

High Speed Inputs
(DC inputs)

Optional AC Power Supply (isolated)
attaches to left side of controller

Two to Five
Plug-in Slots

Support up to 3 axes of motion
with PTO

High Speed Outputs
(DC outputs)

USB

Run/Program Switch

12/24V sink/source,
relay output models

DIN Rail or Panel Mount

Micro830 Controller

- Designed for standalone machine control applications
- Highly flexible and customizable - “Pay for only what you need”
 - Supports up to 5 plug-in slots
 - Plug-ins customize base unit with additional digital and analog I/O, communication modules and application-specific modules.
 - Expandable up to 88 digital I/O, 20 Analog I/O, 6 Serial ports
- Form factor that is based on number of I/O points that are embedded in the base:
10, 16, 24, or 48
 - Entire family shares plug-ins and accessories.
 - Removable terminal blocks available on 24 pt and 48 pt models for easier wiring
- Embedded Communications
 - USB programming
 - Non-isolated serial port (RS232/485) for communications to HMI
 - CIP, Modbus RTU (Master/Slave), ASCII.
- Embedded motion capabilities with up to 3 axes of motion on Transistor Output models provide
 - High speed (100usec) interrupts - supported on DC input models, and allows as many as six 100 kHz High-Speed Counter inputs (HSC) with PLS support.
 - Up to three 100 KHz Pulse Train Outputs (PTO)
 - Single axis moves supported via Motion Instructions
 - Touch Probe is for registering the exact position of an axis that is based on an asynchronous event. It is embedded in controller hardware and so is more accurate than interrupts alone.

Micro850® Anatomy

Micro PLC with Ethernet and Expansion I/O

Rockwell
Automation

Embedded 24 VDC Power Supply

High-Speed Inputs and Outputs
(DC inputs/outputs)

Support up to 3 axes of motion
with PTO

Up to 4 Expansion I/O modules

Ethernet

RS232/485
Serial Port
(non-isolated)

USB

Run/Program
Switch

12/24V sink/source,
relay output models

Up to Five
Plug-in Slots

Bus Terminator
2085-ECR

Support a maximum
Of 132 I/O points

Removable terminal blocks on both
controller and expansion I/O

Optional AC Power Supply (isolated)
attaches to left side of controller

DIN Rail or
Panel Mount

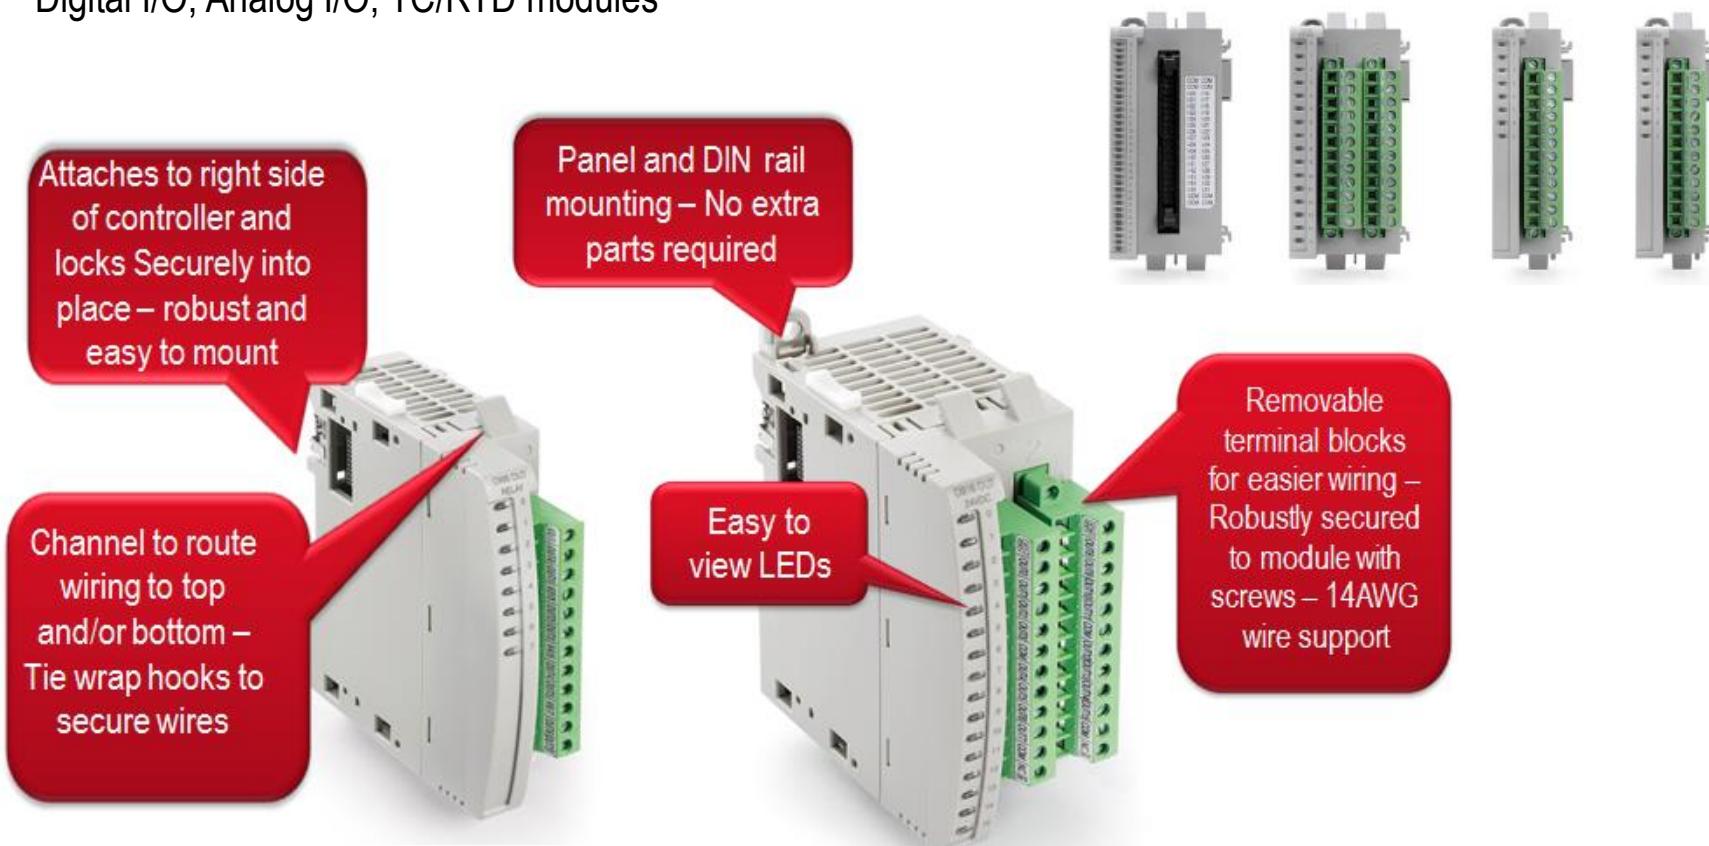

Micro850 Controller

- Designed for larger standalone machine applications that require Ethernet connectivity and higher density, higher precision analog and digital I/O as compared to Micro830 controller
- Equipped with same form factor, plug-in support, instruction/data size and motion capabilities as Micro830 24-pt and 48-pt controllers
- All capabilities of Micro830 plus additional capabilities:
 - Embedded Ethernet port then supports EtherNet/IP and Modbus TCP/IP
 - Support up to four 2085 Expansion I/O modules. Expandable up to 132 digital I/O
- The 2085 Expansion I/O module snaps firmly to the right side of Micro850 controller to form a solid block. This feature creates ease of installing of Micro850 and Expansion I/O onto the panel

2085 Expansion I/O for Micro850

- Single (26 mm) and double wide (46 mm) form factors minimize panel space. On average 20% narrower than 1762 I/O
- Attaches to the right side of controller and locks securely into place – robust and easy to mount
- Digital I/O, Analog I/O, TC/RTD modules

Micro800 Plug-In Modules

Rockwell
Automation

■ Change the “Personality” of the Base Unit Controller with Plug-In Modules

- Extends the functionality of the controller without increasing the panel space
- Allows highly customizable hardware configurations
- Wide range of Plug-ins available for **Micro820**, **Micro830** and **Micro850** controllers

Plug-in Types

- **Analog input/output** (2-channel / 4-channel, non-isolated)
 - Up to 20 Analog inputs
- **Digital I/O**
 - Double the amount of digital I/O without increasing footprint of controller
- **Resistance Temperature Detector/Thermocouple** (2-channel, non-isolated)
 - Makes temperature control possible when used with PID with auto tuning
- **Trim Potentiometer** (6-channel, analog input)
 - Low-cost method of adding six analog presets for speed, position and temperature control
 - Allows simple tuning or adjustment of system without PC
- **Serial Port RS232/485** (isolated)
 - Address even the most intensive serial communications tasks with CIP, Modbus RTU and ASCII protocol support
 - Up to five additional serial ports

- ***Backup Memory with High Accuracy Real-Time Clock**
 - Can be used to clone/update Micro800 application code.
 - Adds precision real-time clock function without needing to calibrate or update
- **DeviceNet Scanner**
 - Enhances Micro800 communication capabilities up to 20 nodes of PowerFlex® AC drives or CompactBlock™ LDX I/O
 - Reduces wiring and installation costs for larger standalone machines that have distributed drives and I/O
- **Motion High-Speed Counter**
 - Supports Touch Probe Input in hardware for exact registration of axis
 - Provides position verification for servo feedback and encoder feedback modes
- **Application-specific Plug-ins from Encompass Partners**

*Backup Memory with High Accuracy Real-Time Clock plug-in is not supported on Micro820 controller.

SPECTRUM
CONTROLS

ProSoft
TECHNOLOGY

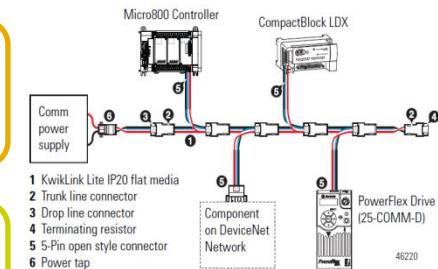

HARDY
PROCESS SOLUTIONS

DeviceNet™ Scanner Plug-in

- **DeviceNet Scanner Plug-in**
 - Simplified DeviceNet setup – “Easy as 123”
 - All configuration uses Connected Components Workbench - No other software required
- For controlling up to 20 nodes
- Compatible with all DeviceNet media
- Reduces installation costs

- 1
- **Physical Network**
 - Wire Network and Set Node Addresses

- 2
- **Software Configuration in Connected Components Workbench**
 - Add one RA pre-configured UDFB to configure one device

- 3
- **Auto Creation of Scan List**
 - Enable auto scan for nodes 1-20 (UDFB in R6, CCW in R8)
 - No Network configuration needed

Comparison between Expansion I/O Versus Plug-ins

Rockwell
Automation

Features	Plug-In	Expansion I/O
		
Terminal Block	Non-removable	Removable Terminal Block
Input Isolation	Non-isolated analog inputs	Isolated analog inputs
Analog resolution and accuracy	12-bit resolution for Analog I/O 1% accuracy for Analog I/O 1degC accuracy for TC/RTD	14-bit resolution for Inputs 12-bit resolution for Output 0.1% accuracy for Analog I/O 0.5degC accuracy for TC/RTD
Filter times	Fixed 50/60Hz filter	Configurable filter times
I/O density	2 pts to 8 pts	4 pts to 32 pts
Footprint	No increase in controller footprint	Width of controller increases with Expansion I/O
Different variety of modules	Isolated Serial port, Trimpot, Memory Back-up, RTC, DeviceNet, HSC, Digital I/O, Analog I/O, Encompass Partner's Products	Digital and Analog I/O modules only

Customer gets better I/O performance for Expansion I/O

Micro800 Optional Power Supply

- Output is regulated 1.6A@24VDC for Micro800 controllers
 - Typically used with smaller systems when Customer does not have their own existing 24 VDC power supply or
 - Used to provide isolated 24 VDC power for noisy environments
- Typically used with Micro820, Micro830 and Micro850 controllers:
 - Micro820/830/850 do not have integrated AC to DC power supply
- Catalog number
 - 2080-PS120-240VAC

Power supply can be attached optionally to left side of controller base unit – all wiring is external

Agenda

Micro800 Family Overview

Value Proposition Of Micro800 System

Applications For Micro800

Overview Of Resources

Why Micro800 and Connected Components Workbench Software?

Rockwell
Automation

- Micro800 and Connected Components Workbench (CCW) offers:
 - **Cost Effective** solution
 - Reduces total cost of machine
 - **Easy to implement** solutions
 - Easy to configure, Easy to program, Easy to visualize
 - Reduces machine development time, improves time to market

Flexibility, Scalability and Reuse with Micro800

Rockwell
Automation

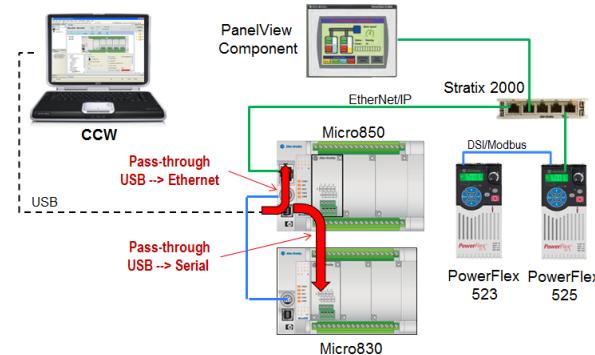

- Plug-in concept offers high **flexibility** to customize your controller to your application need
 - Up to 5 slots – multiple serial ports made possible.
 - No competitors can match the wide variety of plug-in modules that are offered in Micro800 system.
 - Special application plug-ins from Rockwell Automation Encompass Partners.
 - Save space.
- Highly **scalable**. For more I/Os, there are 2085 Expansion I/O modules and Compact Block LDX on DeviceNet
 - Up to 132 digital I/O with 2085 Expansion I/O
 - Additional 320 I/O with Compact Block LDX on DeviceNet
- Controller Change supports **reuse** of project that is developed on one controller to the other

Micro800 Controllers Offer a Wide Variety of Connectivity Options

Rockwell
Automation

- Offers a wide variety of communication options for device connectivity to meet your application needs.
- **Plug and play USB port** makes it easy to connect CCW Programming software to Micro800 controller. Improves efficiency during machine development and commissioning phase.
- **CIP Pass-through** saves time and effort while configuring your system and collecting data
- Supports **CIP Symbolic** and EtherNet/IP. It is ideal for communication to Logix products.
- DeviceNet scanner for distributed I/O
- Supports Modbus and ASCII protocols for connectivity to third-party devices

EtherNet/IP™

DeviceNet™

Micro800 controller	USB programming port	Serial Port			Ethernet		DeviceNet (via Plug-in)
		CIP Serial (Client/Server)	Modbus RTU (Master/Slave)	ASCII/Binary	EtherNet/IP (Client/server)	Modbus TCP (Client/Server)	
Micro810	Yes ¹	No	No	No	No	No	No
Micro820	Yes ²	Yes	Yes	Yes	Yes	Yes	Yes
Micro830	Yes	Yes	Yes	Yes	No	No	Yes
Micro850	Yes	Yes	Yes	Yes	Yes	Yes	Yes

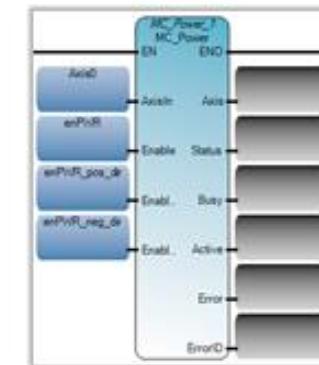

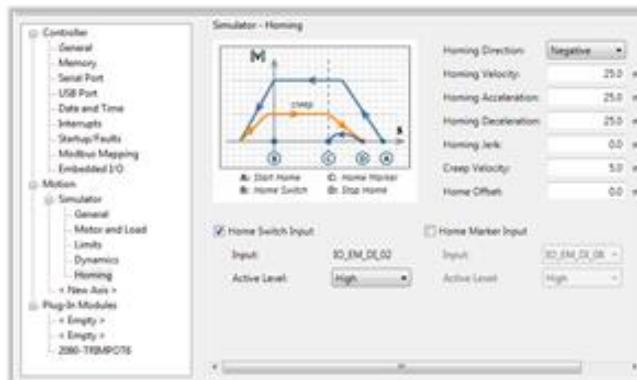

Note: 1: via USB adaptor (2080-USBADAPTER)

2: via Remote LCD (2080-REMLCD)

Micro800 Component Motion Easy to Program, Cost Effective Solution

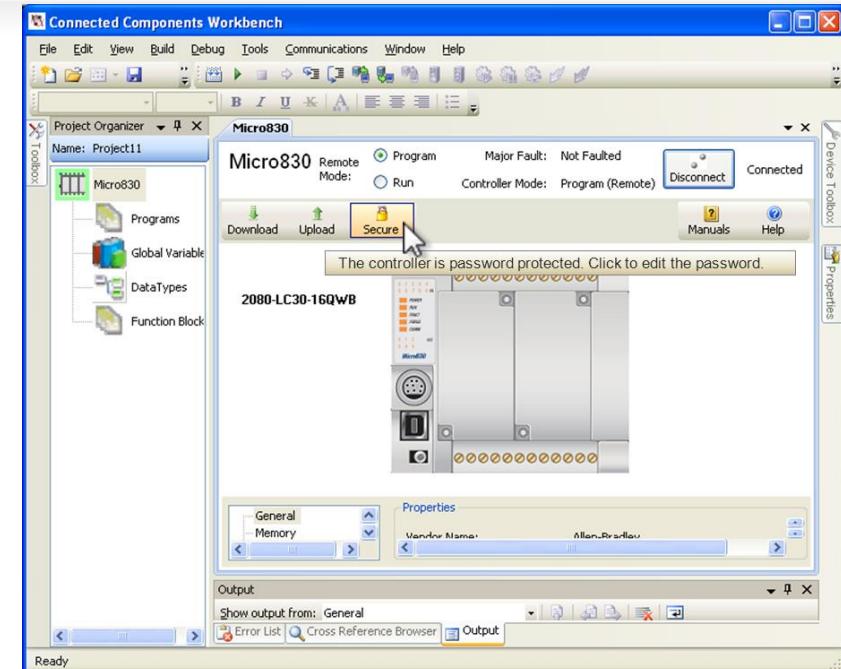

Rockwell
Automation

- Touch probe is a low-cost method to achieve **accurate position registration**
- HSC-Motion Plug-in supports pulse frequencies up to 250 kHz, for **accurate position feedback** from encoders and servo drives
- **Easy motion programming.** Simple to use axis configurations screens; Axis Monitor shows important information about the status of axes; commonly used PLCopen instruction reduces learning curve

Password for Security and IP Protection

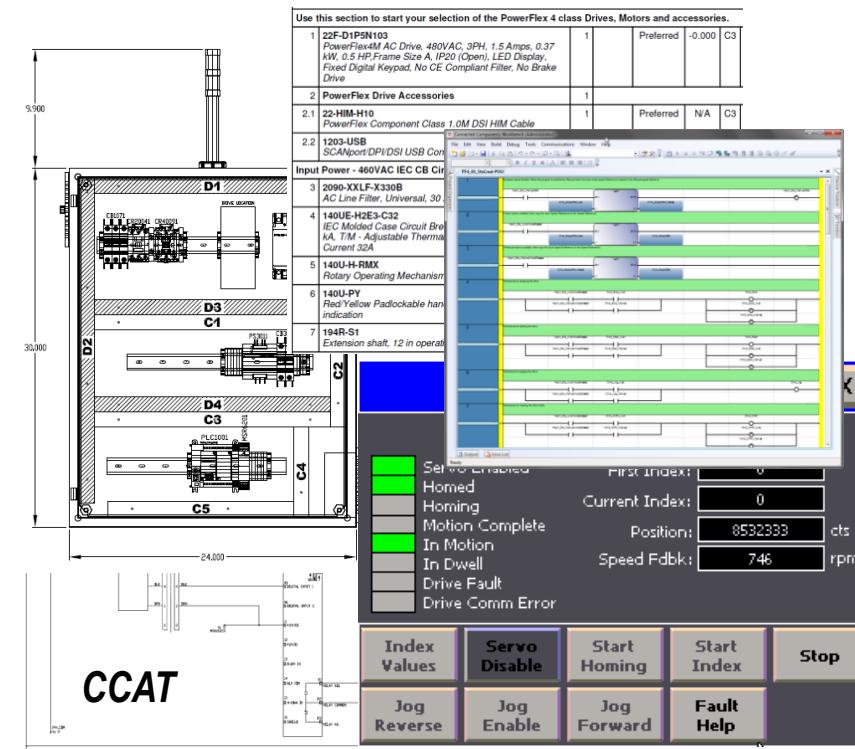

- Improves security and intellectual property protection for Micro800
 - Supports creation of strong passwords
 - Controller enforces whether access is granted to controller
 - Supports display of protection status and user name to determine current user
 - Password is encrypted in all communications with CCW
 - No backdoor password (If password is lost, need to update controller!)
- Password protection for UDFB in CCW Developer edition.

CCAT, Application Starter Kit and UDFA Reduces Machine Development Time

Rockwell Automation

- Connected Component Accelerator Toolkit (CCAT) reduces the machine design, development and commissioning time of OEM by 50%.
- **Machine Application Starter Kit** provides white paper, sample code, BOM and wiring diagram of typical Micro800 applications. Reduces machine conversion time.
- User Defined Function Block (**UDFB**) that are available at sample code library allows code reuse and reduces development time.
- Improves design productivity, time to market.

CCAT

Value Proposition for Micro800 Controllers and Connected Components Workbench Software

- Greater flexibility and scalability with Micro800 Plug-in modules
- Micro800 supports a wide variety of network communication options
- USB port for ease of use
- Micro800 component motion:
Easy to program, cost-effective solution
- Connected Components Workbench software is one software for all essential devices
- Sample application code reduces machine development time
- Password for security and IP protection

EtherNet/IP™
Modbus
DeviceNet™
ASCII

Micro800/CCW offers **Cost Effective** and **Easy to Implement** solutions. Helps machine builder to be competitive.
